

EXECUTIVE READOUT

Marketing Campaign Dashboard Report

Education mix, income concentration, and relationship-status patterns visible in the supplied dashboard.

Directional analysis · supplied dashboard evidence

Graduation is the dominant customer segment

Education

LARGEST VISIBLE GROUP

Graduation leads the education mix in the dashboard.

Sum of Kidhome: Graduation 7, Master 3, PhD 2, 2n Cycle approximately 0.

Source: supplied dashboard screenshot (screenshot-2026-10-06-184857-hz2mdbcf).

Income is heavily concentrated in Graduation

GRADUATION • 938,983

Graduation contributes the largest visible income total, more than twice Master.

Total income by education: Graduation 938,983; Master 429,671; 2n Cycle 564.

The PhD value is visible only as a very small unlabeled bar, so it is not treated as a precise figure. Source: supplied dashboard screenshot (screenshot-2026-10-06-184857-hz2mdbcf).

Relationship status changes recency more than income

Marital status	Income	Recency
Divorced	visible but low	approximately 8
Married	visible but low	approximately 55
Single	visible but low	approximately 12
Together	visible but low	approximately 32

STRONGER SIGNAL

Recency peaks sharply for Married customers and is also elevated for Together customers.

The income series stays comparatively close to the baseline across the visible relationship categories, so recency is the stronger differentiator in this view.

What the dashboard suggests for campaign planning

01

Prioritize Graduation

Prioritize Graduation customers in audience sizing and offer design.

02

Use Master selectively

Use Master customers as a secondary value segment rather than treating all education groups equally.

03

Build a recency path

Build a recency-aware message path for Married and Together audiences, where the visible recency pattern is strongest.

Planning implication: size around the dominant segment, then differentiate the message by visible recency pattern.

Read this as directional, not causal

01

Aggregated view

The screenshot shows aggregated dashboard measures, not customer-level records or campaign outcomes.

02

Unlabeled values

Several chart labels are small or unlabeled, including the PhD income bar; those values were intentionally not inferred.

03

Validate before reallocating

Validate the segment sizes, time window, and campaign response metrics before reallocating budget.
